R.W. Sidley, Inc., the creator of Pro/Angle, the Original 100% Angular Sand, was established in 1933 as a mining and manufacturing company. Since then we have continued to build the company through high quality products derived from our original core products of silica sand and bank gravel. Our latest edition to our product family is Pro/Angle Bunker Sand.

Pro/Angle Angular Bunker Sand was developed to exceed the technical demands set by golf course builders and architects.

Today's builders and architects demand a consistent penetrometer reading of 2.5 or greater. It's proven that if a sand meets or exceeds this specification, it will increase the playability and the pace of play.

**Penetrometer Test Results**  
 (average of several independent tests)  
 PGA Recommends a 2.5 minimum

### Compare the Pro/Angle Difference

Pro/Angle, the original 100% Bunker Sand, not only increases playability, it reduces the cost of bunker maintenance.

The angular particle technology lends itself to:

- Greater wind resistance
- Superior slope retention
- Excellent drainage
- Greater overall product retention
- Eliminates the need for extra compaction to "firm" up bunker

### Partial list of those who have selected Pro/Angle® Bunker Sand:

| Course Name                 | City, State  | Contact Name      | Phone        |
|-----------------------------|--------------|-------------------|--------------|
| Muirfield Village Golf Club | Dublin, OH   | Paul Latshaw, Jr. | 614-889-6700 |
| En-Joie Golf Club           | Endicott, NY | Bob Miller        | 607-754-2155 |
| Shadow Glen The Golf Club   | Olathe, KS   | Scott Johnson     | 913-764-6531 |
| Alliance Country Club       | Alliance, OH | Gary Stroudt      | 330-823-5721 |

|                             |                  |                     |              |
|-----------------------------|------------------|---------------------|--------------|
| Lake View Country Club      | North East, PA   | Gordon Seliga       | 814-725-9561 |
